Memo to File:

RE: Caboose Mine
Mr. John Trujillo
Grand County, Utah

Ron Daniels and Mary Ann Wright inspected this proposed mine site on Bureau of Land Management land with Mr. Trujillo on January 10, 1979. A County maintained road leads to the site. Four existing portals and some waste-rock piles were observed at the site. One portal, which is approximately 100 feet deep, is the one which will be developed. The depth of ore at the site is between 30 and 80 feet. A small stream channel runs by the mine and Mr. Trujillo was advised not to dump mine waste into this channel. Planned surface disturbance is expected to be under 2 acres and a Declaration of Exemption will be filed. Surface disturbance will likely be limited to a camper, a fan, a waste pile, and ore pile.

Vegetation at the site consists of pinyon pine and juniper trees, fourwing saltbush, yucca, asters, desert trumpet, snake weed, and russian thistle.
